Description of Fiscal Data System

Overview of Fiscal Data System

1. Overview of Fiscal Data System

To support data-driven decision making

Fiscal Data System

KOrea Fiscal Information Service

KOrea Risk Assessment and Horizon Scanning

KOrea Data Analysis System

KOFIS

Fiscal
Information
Service

KORAHHS

Policy State
Management
System

KODAS

Data Analysis
Service

Step 01

Provide consolidated information
on public finance

Provide data useful or applicable
to fiscal affairs

Diversify data sources according to the
nature of the affairs

Step 02

Diagnose and forecast policy states
in real time

Implement AI and big data-driven
policy state management

Provide dashboards of key fiscal
issues (employment, etc.)

Step 03

Fuse and analyze
cross-government data

Offer infrastructure for data
application and analysis

Facilitate data (fiscal and private-
sector) fusion/convergence and
subsequent analysis

Description of Fiscal Data System

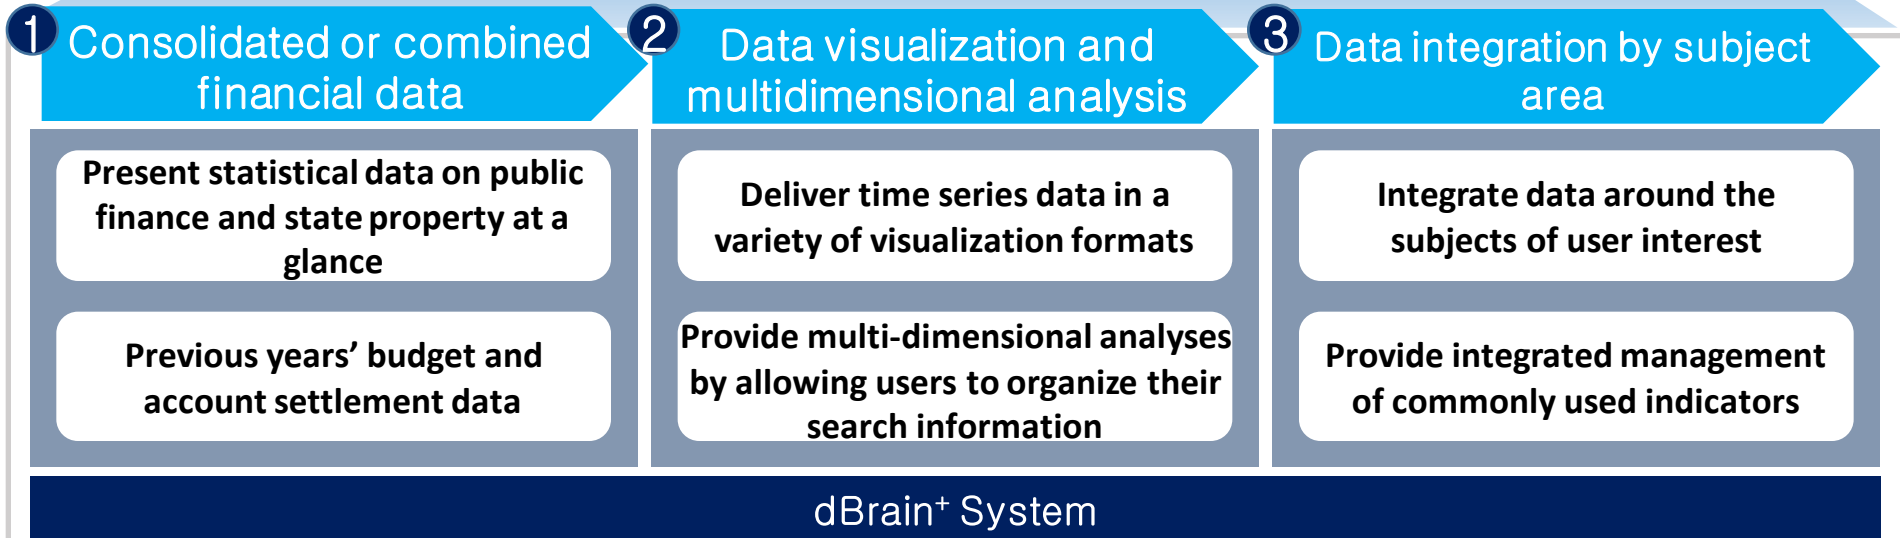

1-1. Fiscal Information Service (KOFIS) – Provide consolidated information on public finance

KOFIS enables users to easily understand public financial information, such as budgets and accounts, and use this information to formulate fiscal policies.

“ Laying the foundation for using fiscal data ”

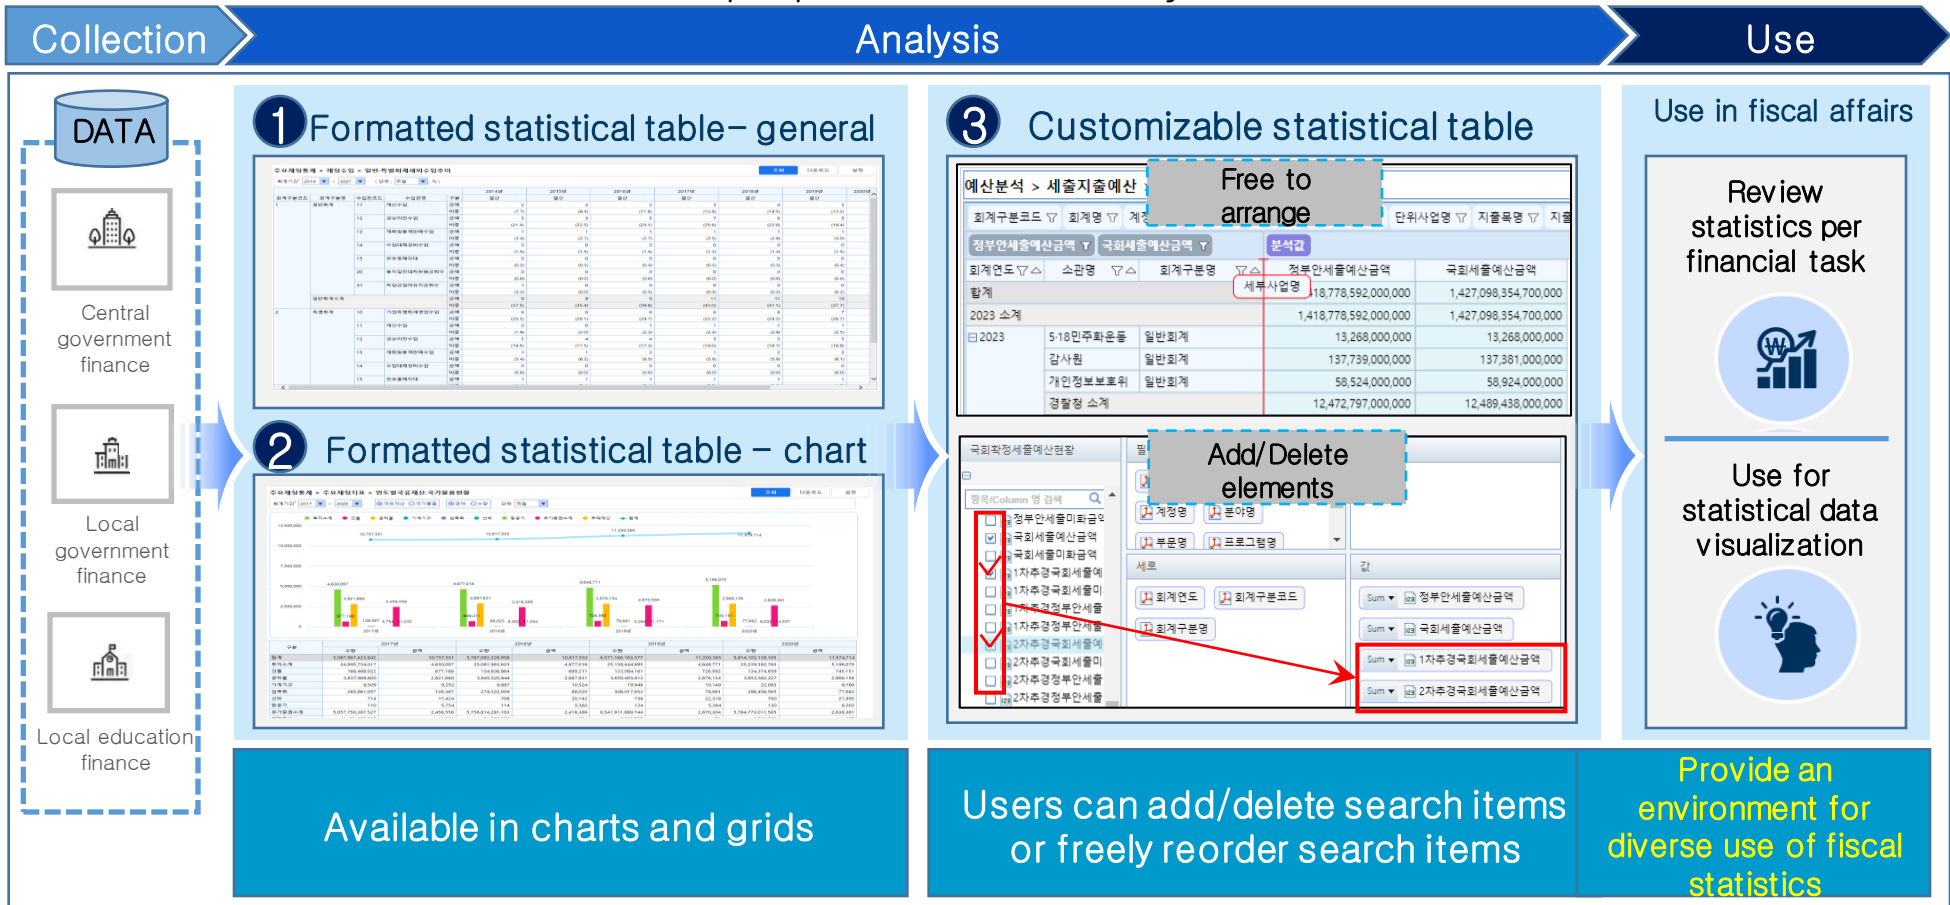

KOFIS (Korea Fiscal Information Service)

Provides data analysis functions and a variety of features to improve work efficiency

1-2. KOFIS – Operational Framework

Provide a data analysis environment that allows users to extract and aggregate data generated by dBrain+ and perform statistical analysis according to the characteristics and purpose of their analysis

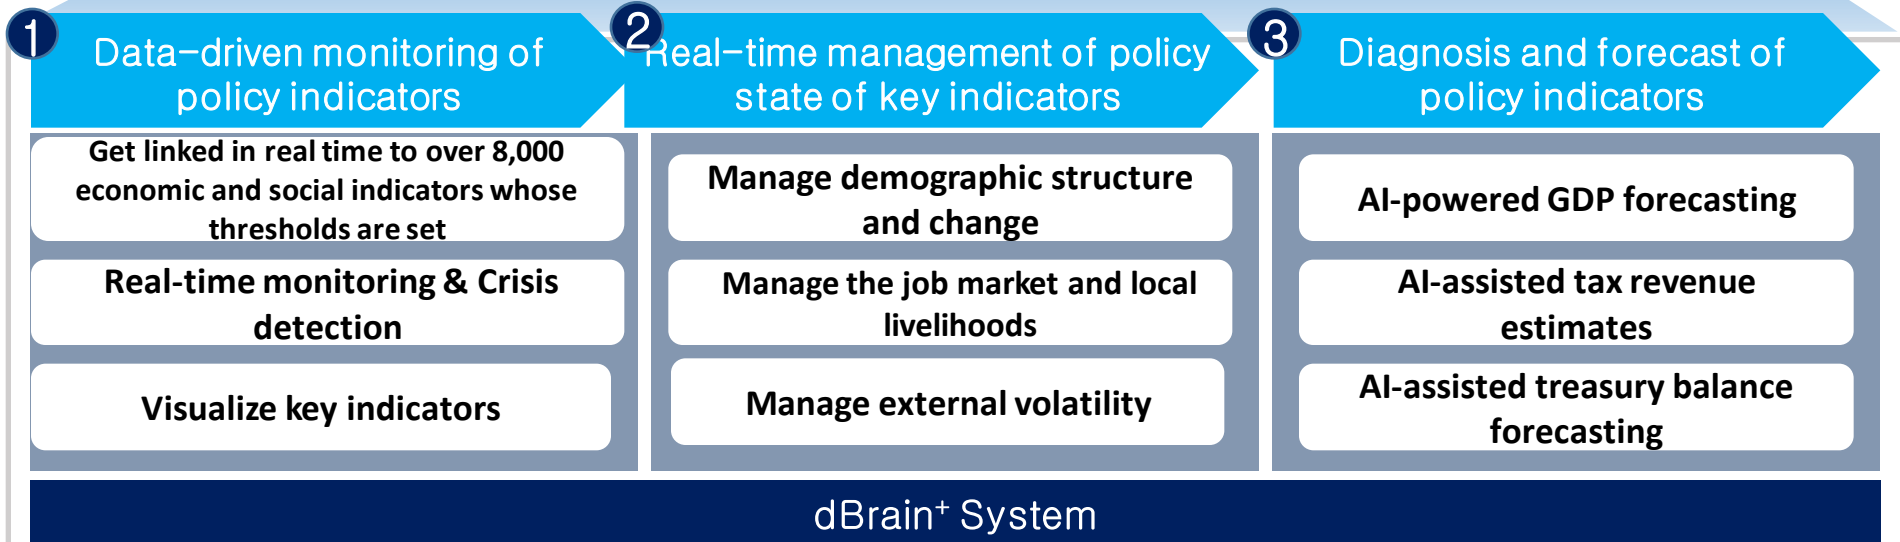

2-1. Policy State Management (KORAHS) : Data-driven policy state management

Get linked to data in real time to **identify future risks and opportunities in advance**, **support data-driven policy decisions**, and take pre-emptive actions

“ Implement **data-driven** policy state management system ”

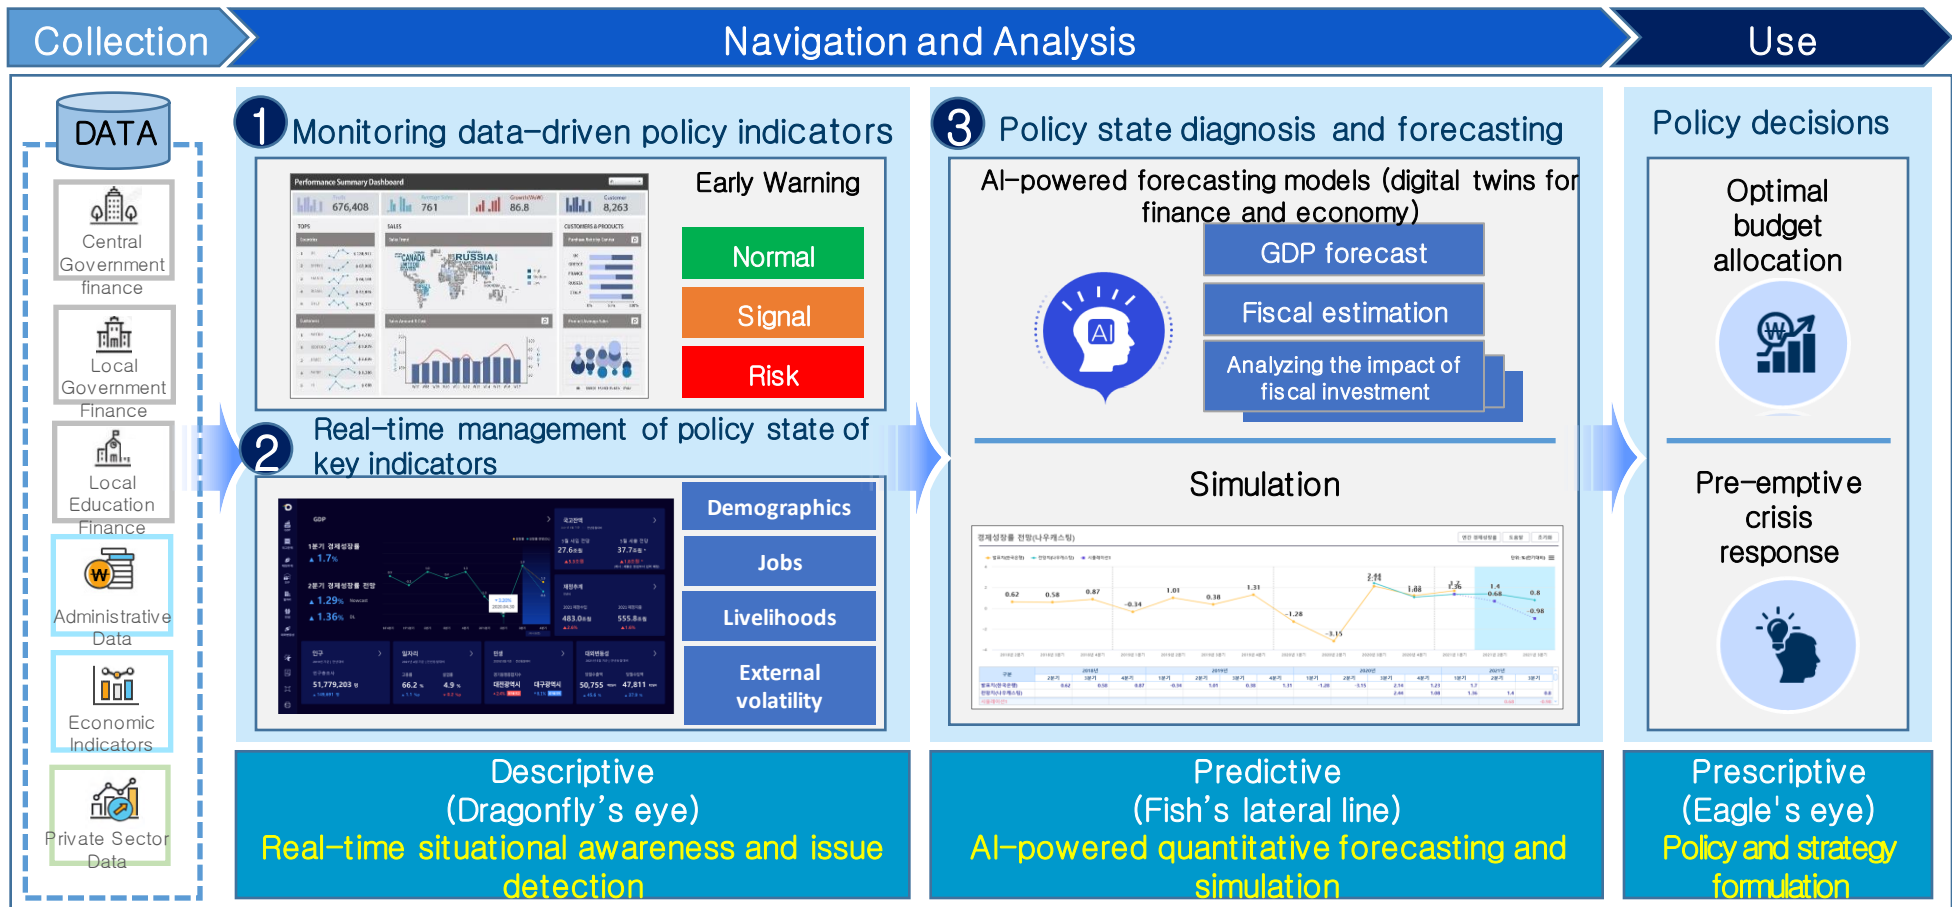

KORAHS (KORea Risk Assessment and Horizon Scanning)

Country-level Risk Assessment and Horizon Scanning

2-2. Policy State Management (KORAHS) – Operational Framework

Collect data on fiscal, economic, and overall policy conditions and **support scientific policy decisions through real-time monitoring and AI-driven forecasting**

2-3. Phase1 Monitoring of Data-Driven Policy Indicators

Monitor policy state by **linking to real-time** economic and social indicators and fiscal data for the entire country, visualize the monitoring results, and **set thresholds*** for changes in indicator values to establish an **early warning** system

Providing visualized policy indicators

* Threshold: Baseline for pre-detecting signs of crisis

Policy indicators subject to monitoring

- ✓ Link to **over 8,000 indicators** in 71 groups of 14 divisions in real time
 - Macro-economic and social indicators, fundamental fiscal statistics, regional statistics
 - dBrain financial information (2,475) + external indicators (5,604)
 - Thresholds set for 5,442 out of 8,079 indicators

dBrain internal indicators (2,475)

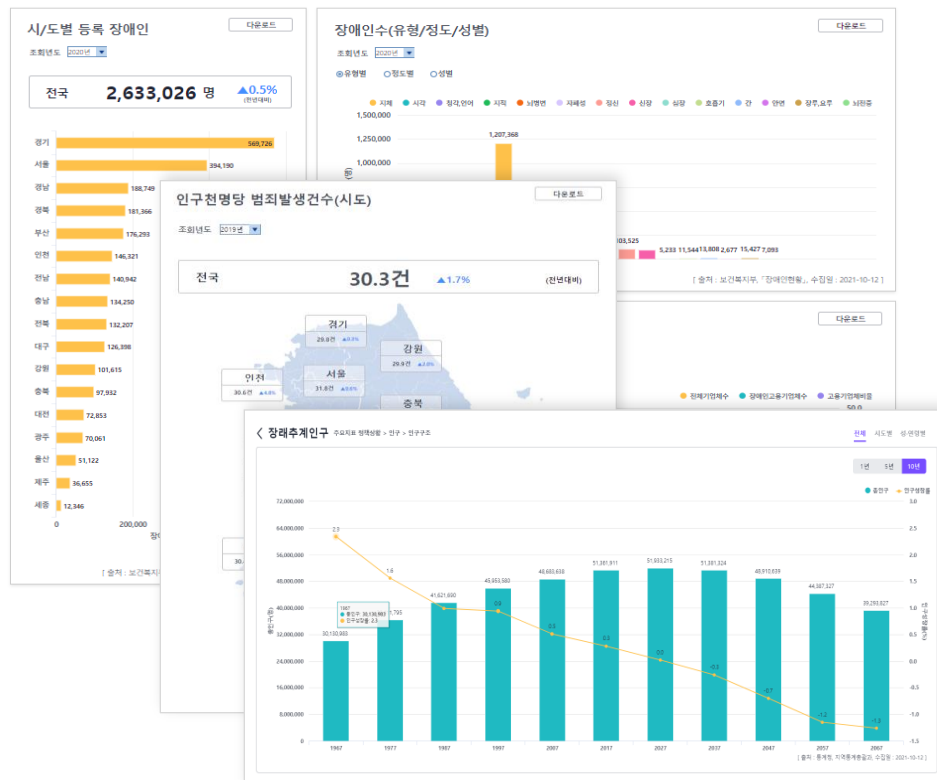

External indicators (5,604)

R&D, Defense, Foreign affairs, Reunification(127)	SOC (224)	Public order, Safety (266)	Education (158)
Agriculture, Forestry, Fisheries, & Food (178)	Culture, Sports, and Tourism (152)	Health, Welfare, and Employment (1,840)	Industry, SMEs, Energy (556)
General/local administration (1,314)	Public finance (148)	Local government finance (189)	Environment (452)

※ Threshold visualization has been applied for over 1,200 indicators now and will be expanded to 8,000 in the future

장애인 등록·고용 정책지표 모니터링 > 보건복지고용 > 기초생활보장 > 장애인 등록·고용

2-4. Indicator Threshold Monitoring – Automatic Early Warning(EW)

An early warning is automatically issued when indicators change outside of the normal range, allowing early detection of crisis signs

Thresholds for policy indicators

Threshold query My threshold indicator **Threshold status**

2-5. Phase 2 Policy Dashboard for Key Policy Issues

Display key policy indicators including **demographics, employment, local livelihoods, external volatility** for in-depth monitoring

Policy State Management Dashboard

Key indicators for policy state management

- ✓ Indicators needed for policy making, such as demographic structure and change
- ✓ Employment state, job creation and quality, the status of fiscal expenditure
- ✓ Indicators related to the early detection of and response to local livelihood challenges
- ✓ External volatility indicators (cross-border finance, exports, etc.)

Demographics

Population projection
Working-age population
Number of births
Total fertility rate
Total dependency ratio
...

37 indicators

Employment

Fiscal projects for job creation
Employment rate
Unemployment rate
Youth unemployment
Non-regular workers
...

21 indicators

Local livelihood

Government subsidy
Fine dust
House price index
Unemployment benefits
Electricity consumption
...

30 indicators

External volatility

Trade, Fiscal project
Import/Export
Exchange rate
Foreign exchange reserves
International balance of payments
...

24 indicators

2-6. Phase 3 AI and Data-Driven Diagnosis and Forecasting of Policy Indicators

Leverage AI technologies to conduct fiscal estimates, including **data-driven GDP forecasting and balance of payments analysis**

Dashboard for policy state diagnosis and forecasting

< 주간경제활동지수 정책지표 진단·전망 > 경제성장률(GDP)

Key indicators for policy state diagnosis and forecasting

✓ GDP Forecast

- Use the latest econometric models and artificial intelligence technologies to get a quick picture of the economic situation in real time.

Weekly economic activity index : Using daily and weekly indicators to quickly assess economic conditions

GDP Nowcasting : Leverage economic time series to update GDP forecasts in real time

AI (deep learning) based GDP forecast : Using a deep learning model (GRU Cell) to predict economic growth

✓ AI-based financial estimation

- Use artificial intelligence to learn historical financial patterns to estimate projections that reflect external economic conditions

✓ Analysis of the impact of fiscal investments

- Using AI and big data technologies, the effectiveness of fiscal investments in 12 areas will be analyzed over a long period of time.

3-1. Data Analysis Service (KODAS) – Data Analysis Infrastructure

Provide a space for government officials and researchers to use and analyze **AI-powered data** and **strengthen data analytics competencies**

Implement **data-driven** administration
and **digital government** platform

KODAS

(Korea Data Analysis Service)

1 Build data platform

- Fiscal data
- Data on economic and social indicators
- Data from the administrative and public sector
- Private sector data

2 Infrastructure for AI data analysis

- Provide online (for public officials) and offline labs (for private sector researchers)
- Offer AI analysis tools, such as Python
- Provide a user-friendly UI

3 Strengthen data analytics competencies

- Opened a data analysis/education center (Aug. 2022, Sejong)
- Run a multi-level data scientist (DS) training program
- Provide customized consulting
- Expand partnerships with other educational organizations

3-2. Data Analysis Service (KODAS) – Objective of Introduction

Implement a work environment essential for **AI and data-driven scientific public administration** in the digital age

In an environment focused on **simple statistical analysis**, primarily using Excel, big data-driven(AI) advanced analysis is insufficient.

An AI-enabled analytics environment is provided to link fiscal data and socioeconomic indicators
Lay the groundwork for **data-driven decision support** across the entire government

AI analysis software is too expensive to buy and install myself...

I'd like to take **data analytics courses** before starting work

I want to get help from **an analytic expert...**

How do I **collect scattered data**?

How do I arrange **research support** for external expert?

I'd like to use the latest AI technologies for task analysis and future forecasting...

- Provide financial, social, and economic data and AI-powered analysis infrastructure
- Organize contests, analytics case sharing, specialized training, consulting, etc.

Working-level decision makers

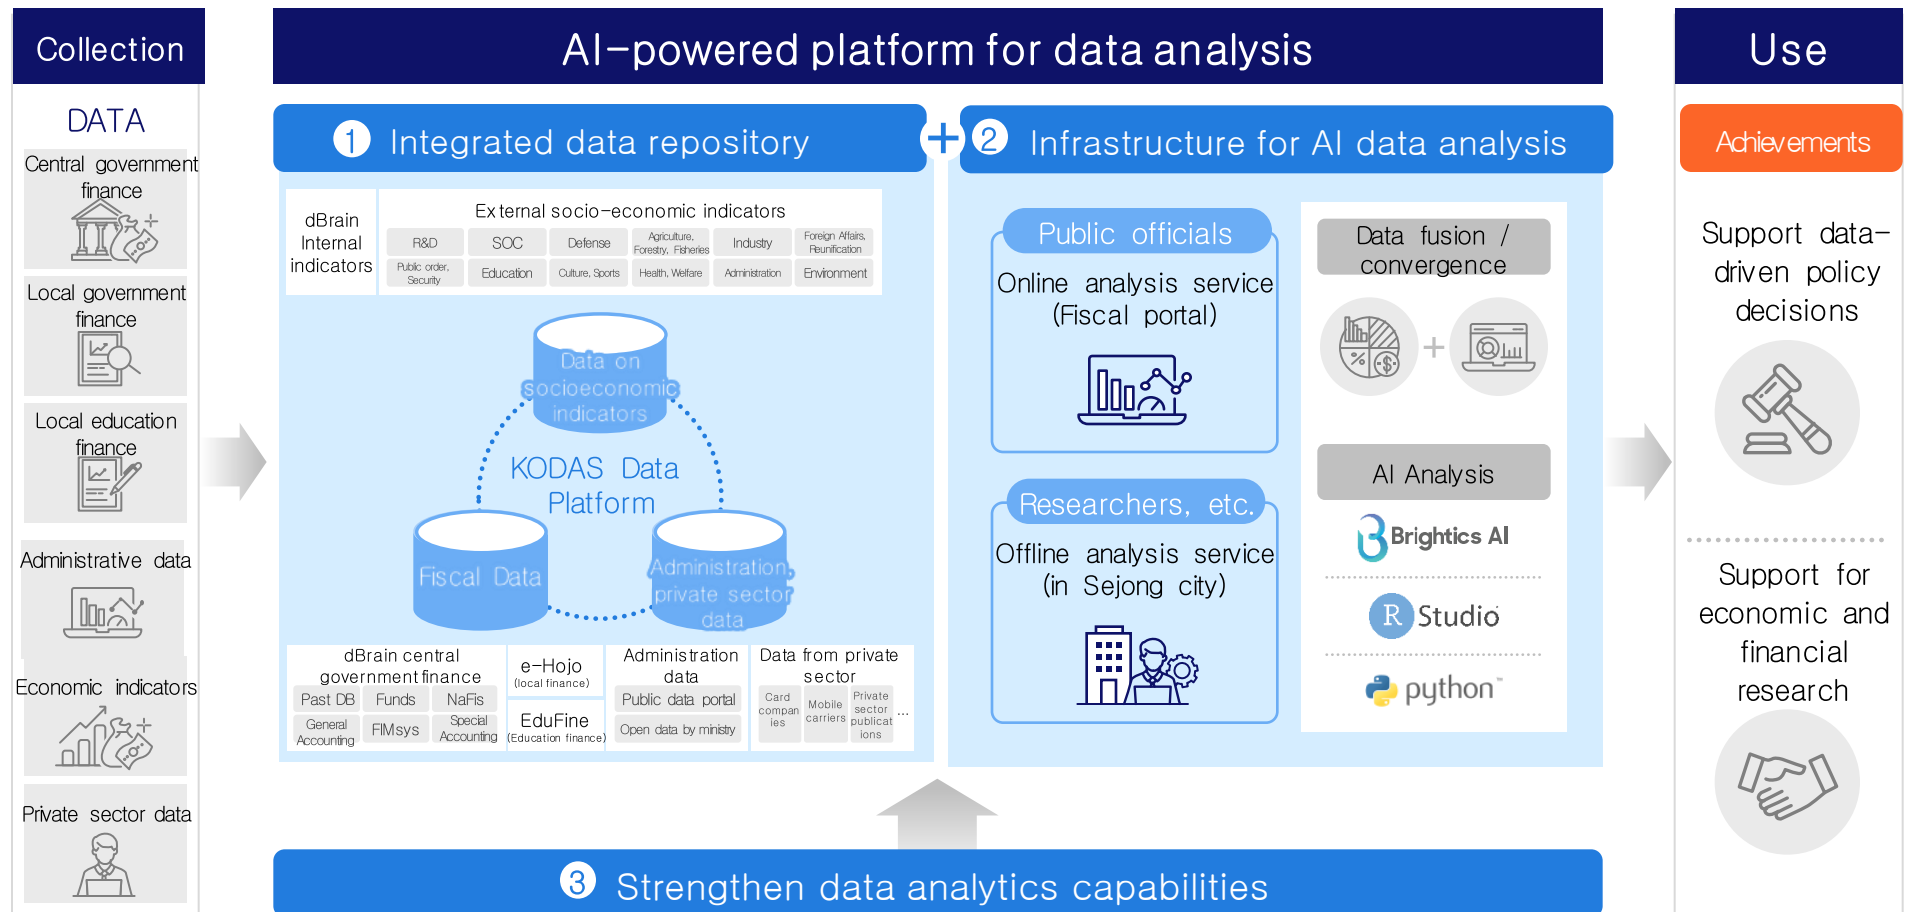

- Provide an analysis environment accessible anytime – Connect to real-time data
- Broader application of analysis results to work within the organization
- Share analysis results and create a virtuous cycle of best practices

Academia, Research institutions

- Support experts in their research on convergence analysis of financial-socio-economic data
- Facilitate the 4th Industrial Revolution (Korean New Deal) by fusing and analyzing public-private data

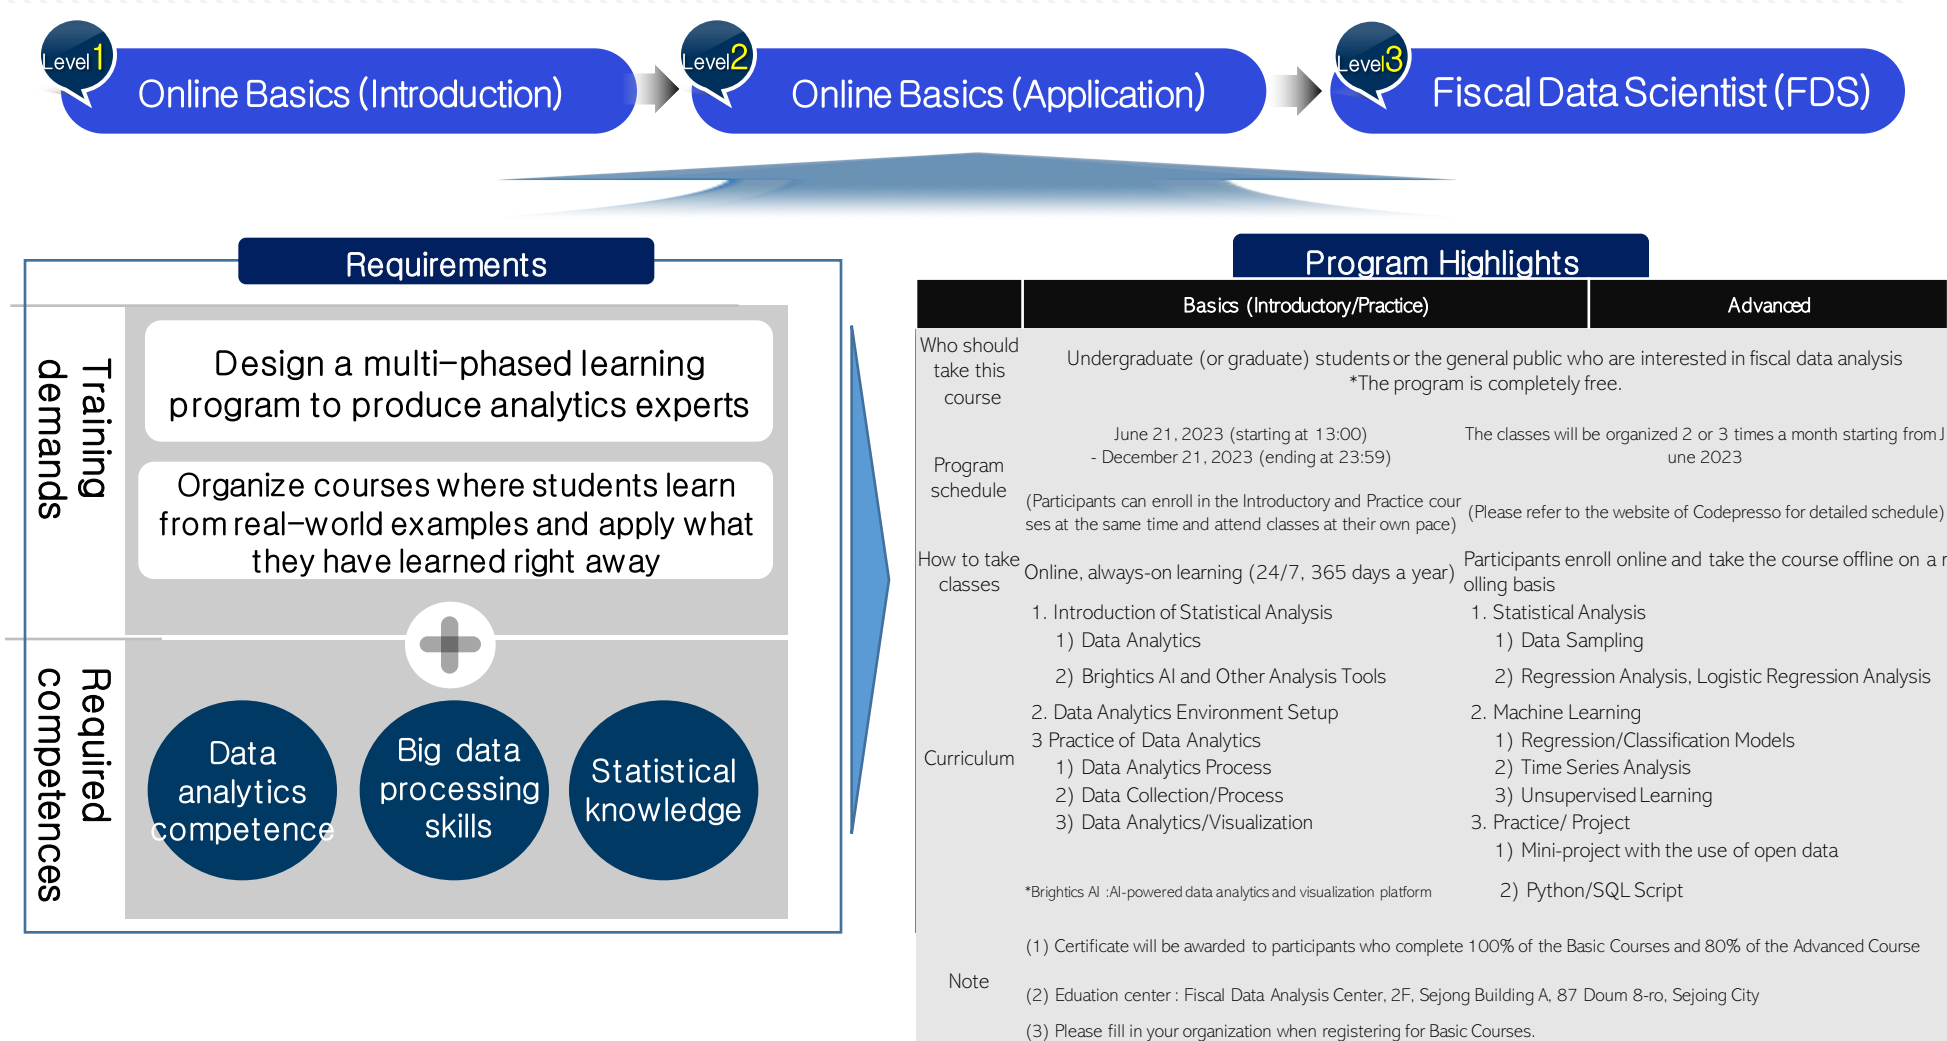

3-3. Data Analysis Service(KODAS) – Operational Framework

Consist of an integrated data repository, infrastructure for AI-powered data analysis, and education program to train data scientists in order to facilitate **data-driven policymaking** and **research in the economy and public finance**

3-4. Data Analysis Service (KODAS) – Education program to train data scientists

A 3-level education program has been established to train data scientists (DS) to enhance data analytics competencies

Thank you
