

# CoA working Group

## *TCOP PEMPAL*

5 April 2013

Guiding Presentation

# Summary of Questions

## *Tallinn*

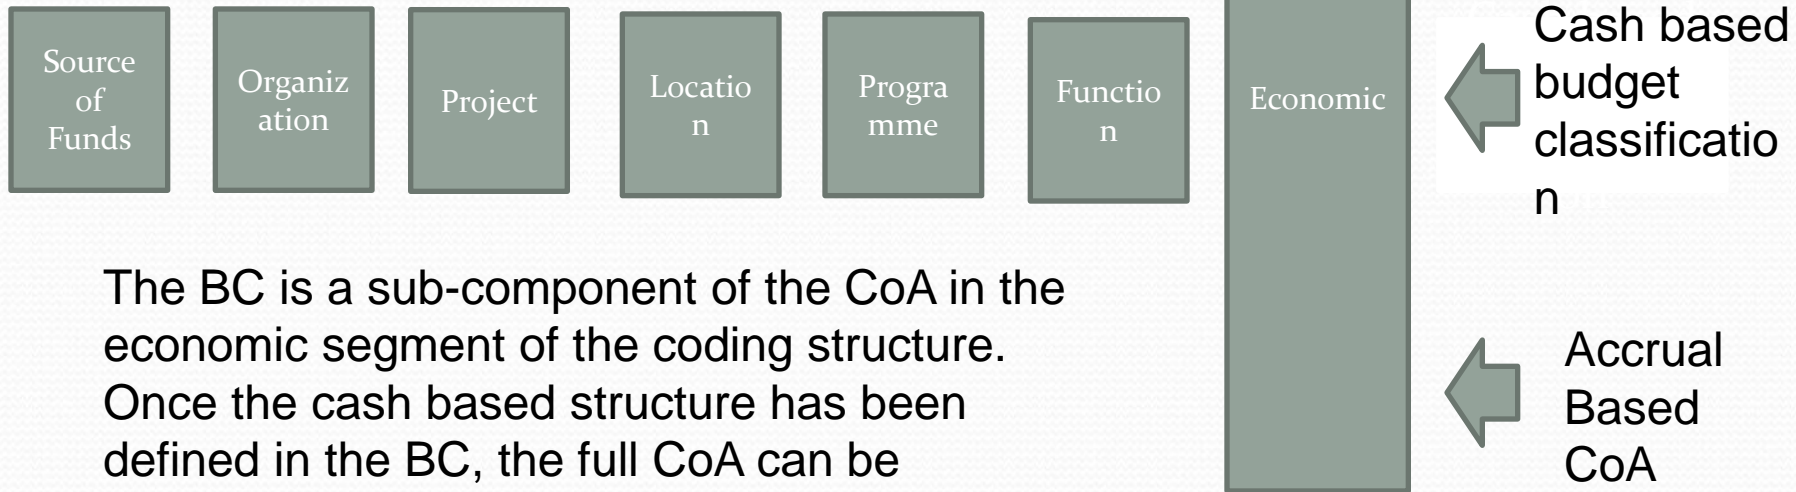

# Questions on BC, CoA and Accounting

- Is it necessary to integrate the public sector accounting CoA with GFS CoA?
- Is it reasonable to fully divide general and treasury accounting?
- Correlation of BC and CoA with the automation of the budget process and public sector accounting
- Developing the CoA in compliance with IPSAS, GFS and national accounts system
- Correlation of BC and CoA with the financial reporting forms

***The Tallinn paper may have adequately addressed these questions***

Using a GFS 2001  
Template for the  
structure

## The Relationship between a cash based budget classification and an accrual Chart of Accounts

The BC is a sub-component of the CoA in the economic segment of the coding structure. Once the cash based structure has been defined in the BC, the full CoA can be developed by adding in the non-cash requirements.

# The structure of BC, linkage between various types of BC and CoA in public sector – mapping of Ukraine structures

| CoA Class            | GFS 2001       | Budget Spending Institutions | Economic Classification | Unified CoA |
|----------------------|----------------|------------------------------|-------------------------|-------------|
| Revenues             | 1              | 7                            |                         | 7           |
| Expenses             | 2              | 8                            | 2                       | 8           |
| Non-Financial Assets | 3 <sup>1</sup> | 1,2                          | 3 <sup>1</sup>          | 1           |
| Financial Assets     | 3 <sup>2</sup> | 3                            |                         | 2,3,4       |
| Liabilities          | 3 <sup>3</sup> | 5,6                          |                         | 6           |
| Equity               |                | 4                            |                         | 5           |
| Off Balance          |                |                              |                         | 9           |

# Integrating Different CoA Structures

- *If the accounting is consistent, then a simple approach for integration is to codify the new structure to the lowest level of the respective structures.*
- *This means that you can still produce information for the most detailed level of any structure, and then use intermediate reporting levels or rollup tables to derive the other reports required.*
- *The lowest level only should be used if it provides meaningful information for decision making. In some cases, lower-level accounts may be too detailed or redundant.*

*In Moldova, once the mapping was completed for each structure, a spreadsheet was created which showed the alignment of all six CoA in operation. This proved very useful in showing the commonality between the different CoA and also then building the new fully integrated structure.*

# Supplementary Questions from Working Group – to be addressed at the Video Conference

## What is the optimum length of a Government CoA?

- The length that allows all relevant financial information to be captured, stored and reported
- Define your CoA schematic as a first step
- Ensure you understand the level of detail required for each segment, and the relationship between different levels within each segment
- Ensure you first design what you need – do not consider system or other restrictions at this juncture

# Typical Government CoA Structure

| Organization | Source of Funds | Economic | Location | Program                            | Function | Project  | Total     |
|--------------|-----------------|----------|----------|------------------------------------|----------|----------|-----------|
| MMDDSSSS     | FFsDD           | COOIAA   | OORLL    | PPSSAA                             | FFS      | PPPC     |           |
| 8 digits     | 5 Digits        | 6 digits | 6 digits | 6 digits<br>(not currently in use) | 3 digits | 4 digits | 36 digits |

# Example of CoA Schematic

| Level | Organ.             | Source of Funds                 | Economic                                  | Location              | Program                 | Function                | Project          |
|-------|--------------------|---------------------------------|---|-----------------------|-------------------------|-------------------------|------------------|
| 1     | Ministry<br>(MM)   | Fund<br>(FF)                    | Class<br>( C )                            | Oblast<br>(OO)        | Program<br>(PP))        | Function<br>(FF)        | Project<br>(PPP) |
| 2     | Department<br>(DD) | Sub-Fund<br>(s)                 | Object<br>(OO)                            | Rayon<br>(RR          | Sub-<br>Program<br>(SS) | Sub-<br>Function<br>(S) | Component<br>(C) |
| 3     | Unit<br>(SSSS)     | Developmen<br>t Partner<br>(DD) | Intermediate<br>Reporting<br>Level<br>(I) | Local<br>Govt<br>(LL) | Activity<br>(AA)        |                         |                  |
| 4     |                    |                                 | Account<br>(AA)                           |                       |                         |                         |                  |
|       |                    |                                 |   |                       |                         |                         |                  |
|       | 8 digits           | 5 Digits                        | 6 digits                                  | 6 digits              | 6 Digits                | 3 digits                | 4 digits         |

# Using Unique Numbers for Components of the CoA

| Year | Code   | Ministry                         | Department               |
|------|--------|----------------------------------|--------------------------|
| X    | 311234 | 31 -Education and Social Welfare | Primary Education - 1234 |
| X+1  | 321234 | 32- Tourism and Education        | Primary Education - 1234 |

# Using Unique Numbers for Components of the CoA

| Source of Fund        | Project                                    |
|-----------------------|--|
| 313 - Donor Fund - EU | 4321 - Sector Wide Approach to Health Care |
| 321 Donor Fund - DFID | 4321 - Sector Wide Approach to Health Care |

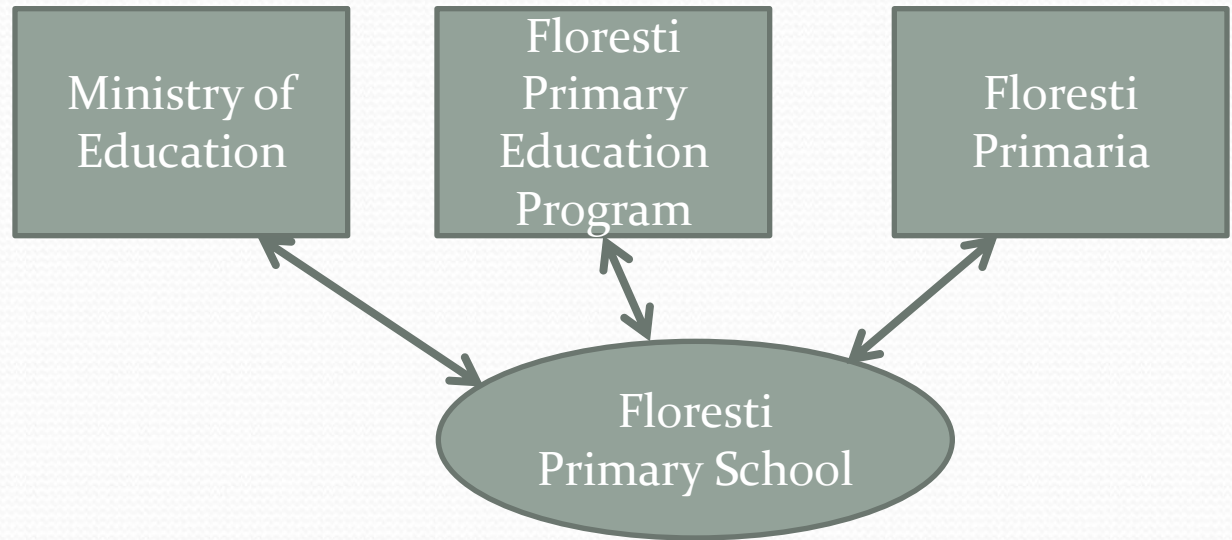

# Using Numeric vs Alphanumeric Codes

| Code Length | Numeric            | Alpha-Numeric          |
|-------------|--------------------|------------------------|
| 1 Digit     | $10^1 = 10$        | $36^1 = 36$            |
| 2 Digit     | $10^2 = 100$       | $36^2 = 1,296$         |
| 3 Digit     | $10^3 = 1,000$     | $36^3 = 46,656$        |
| 4 Digit     | $10^4 = 10,000$    | $36^4 = 1,679,616$     |
| 5 Digit     | $10^5 = 100,000$   | $36^5 = 60,466,176$    |
| 6 Digit     | $10^6 = 1,000,000$ | $36^6 = 2,176,782,336$ |

# The Power of the Relational Database – The “Short Code”

One to one relationships between the spending Unit and other components of the CoA

Once the relationship is defined in the CoA, if we know that the transaction involves Floresti Primary School, we also know the ministry, program and location. We do not need to define these in the transaction.

# Can a segment in the CoA have different code lengths?

- **FMIS requirements** – most systems require a common code length for some aspects of each segment, as this determines reporting and control requirements within each segment.
- **Ensuring that the CoA is uniform in length makes it more intuitive for users, easier to explain in manuals and easier to use for user-defined reporting.**

# Different code lengths for users but the same code length in the FMIS

| Project                                      | Number of budget and reporting levels | Codes    |
|--|---------------------------------------|----------|
| Refurbishment of Kiev Hospital –single level | 1                                     | 12340000 |
| Refurbishment of Kiev Hospital –two level    | 2                                     | 12341100 |
| Refurbishment of Kiev Hospital –three level  | 3                                     | 12341111 |

## ***Implement a new CoA or make the mapping between the budget classification and accounting?***

- Why is the accounting not aligned to the budget classification, given that budget control and reporting against the budget represent an important element of accounting under both the cash and accrual IPSAS?
- If alignment issues are not significant, mapping is an adequate intermediate option (i.e. one-to-one or many to one relationships exist between structures)
- However, if “many-to-many” or “one-to-many” mapping issues between structures exist you will have major reporting issues
- At the next major phase of change to the FMIS/CoA it would be useful to also integrate the BC/CoA

# Residual Questions

- Is it necessary to implement (at full scale) program budgeting when the new CoA is introduced?
- What is required for accounting for foreign exchange transactions?
- Should we use the direct or indirect method of reporting cash flow statements?

*Is it necessary to implement (at full scale) program budgeting when the new CoA is introduced?*

- The implementation of CoA segments, such as a program segment, should only occur when they are required.
- It is standard for countries to take a very gradual, medium- to long-term approach to PB reform.
- When designing a new CoA, it is important to anticipate these requirements, and build them into the proposed structure.
- However, the segment would only be activated at the time that PB recording is required.
- The actual PB segment can also be implemented on a transitional basis, for example programs and sub-programs in phase one, with activities added in the future.

# Transition of Budget Control in the CoA from Inputs to Outputs and Outcomes

Gradual Transition to Results Based management and reporting
